

APPU ANAND

Data Analyst | Business Intelligence Analyst | MIS Analyst
+91 8330804690 | appu12anand@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | Kerala, India

PROFESSIONAL SUMMARY

Results-oriented Data Analyst with 2+ years of progressive experience converting complex operational data into strategic insights across Automotive, Smart City, and QSR verticals. Adept at designing scalable analytics infrastructure — from SQL-driven KPI models to automated MIS pipelines and interactive Power BI dashboards — that directly accelerates business decisions. Delivered 20% improvement in data accuracy, 30% reduction in manual reporting effort, and consistent cross-functional SLA adherence. Combines deep technical proficiency in Python, DAX, and ETL with strong stakeholder communication and process optimization expertise.

CORE SKILLS

Technical: SQL (CTEs, Window Functions), Python (Pandas, NumPy), Power BI, DAX, Tableau, Advanced Excel, ETL, Data Visualization.

Data Analytics: KPI Modeling & Monitoring, Data Validation, Root Cause Analysis, Cohort Analysis, EDA, Dashboard Storytelling, Reporting Automation.

Business: MIS Reporting, Process Optimization, SLA Monitoring, Stakeholder Management, Business Intelligence, Cross-functional Collaboration.

PROFESSIONAL EXPERIENCE

Executive – Delivery Operations & Analytics | Nippon Toyota Pvt Ltd, Kerala | Nov 2025 – Present

- Spearhead end-to-end operational analytics for 80+ monthly vehicle deliveries, orchestrating cross-functional data flows across finance, insurance, and logistics to drive SLA-compliant delivery execution.
- Architected and maintain real-time MIS dashboards monitoring delivery KPIs, approval cycles, and logistics timelines; engineered Excel automation that compressed reporting turnaround by 40%, freeing stakeholder bandwidth for strategic decisions.
- Established data integrity protocols reconciling records across RTO portals and dealership systems; translated validated data into targeted ad hoc analyses and executive-ready reports informing decisions across 5+ departments.

Junior Lead – Data Operations & Analytics | Cogniphi Technologies Pvt Ltd | Nov 2023 – Apr 2025

- Directed a 10-member data operations team across high-stakes Smart City projects, implementing structured task allocation frameworks, multi-tier quality checkpoints, and milestone tracking to sustain consistent SLA adherence at scale.
- Engineered a data validation and quality assurance framework that reduced annotation errors by 20%; simultaneously developed Power BI dashboards with advanced DAX measures surfacing TAT trends and operational KPIs for 50+ cross-departmental stakeholders.
- Transformed manual MIS reporting operations by designing automated workflows using Excel Power Query and Python (Pandas), eliminating 30% of recurring manual effort and establishing a more reliable, error-resistant reporting pipeline.

Data Analyst (Contract) | Cogniphi Technologies Pvt Ltd | Apr 2023 – Oct 2023

- Architected a QSR operational intelligence dashboard dissecting wait-time distributions, peak-hour demand surges, and service throughput metrics, equipping operations leadership with actionable levers for efficiency improvement.
- Constructed time-series KPI models leveraging SQL window functions, multi-level aggregations, and CTEs to surface performance trends and anomalies, enabling data-backed operational decisions at the executive level.

PROJECTS

Fraud Detection Explorer | Python, Streamlit, XGBoost, SHAP | Sep 2025

- Engineered a fraud detection pipeline on a Kaggle credit card transaction dataset, applying XGBoost with SMOTE-based oversampling to resolve class imbalance and calibrating the precision-recall tradeoff to maximize fraud capture rate.
- Deployed an end-to-end Streamlit application integrating SHAP explainability to demystify model decisions — presenting feature importance rankings, EDA visualizations, and real-time predictions, bridging the gap between ML complexity and business interpretability.

Customer Segmentation & Marketing ROI | SQL, Power BI | Aug 2025

- Engineered a multi-dimensional customer segmentation model using complex SQL CTEs and cross-table joins, isolating high-value customer cohorts and uncovering behavioral patterns invisible in aggregate reporting.
- Constructed a cohort-based marketing ROI attribution model in Power BI enabling segment-level performance benchmarking, reducing analyst reporting effort by 30% and accelerating campaign decision cycles.

Retail Sales Root Cause Analysis Dashboard | Power BI, DAX, Excel | Jul 2025

- Designed a multi-layered Power BI diagnostic dashboard tracking revenue velocity, margin compression, and promotional discount impact across geographic retail regions — providing leadership with a unified performance command center.
- Applied advanced DAX measures including time-intelligence functions and dynamic calculated columns to isolate root causes of profit decline, transforming complex multi-variable data into clear, actionable business narratives.

EDUCATION & CERTIFICATIONS

MBA – Business Analytics | Amrita Vishwa Vidyapeetham | Part-time | Expected 2028

B.Tech – Computer Science | Glocal University | 2024

Certifications: Data Analytics Essentials (Cisco, May 2025) • Career Essentials in Data Analysis (Microsoft, Jun 2025)

• Data Analysis Using Python (IBM, Jun 2025) • Data Visualization Using Python (IBM, Aug 2025)

Job Simulations: Accenture Data Analytics & Visualization • Deloitte Data Analytics (Excel, Tableau) • Quantum Data Analytics
